# our standards

**if** you are fed up of being treated like a mice conditioned to jump and buy the next thing with has a flashy name that screams waste, then that's for you. The idea is a minimalist product, with a minimal carbon footprint, a minimal wastage of material and a bare naked packaging. Minimalistic design with a focus on functionalism.

**We** are also proud to be a member of Pet Sustainability Coalition

REPREVE® is the leading, most trusted, branded performance fiber made from recycled materials (including plastic bottles). Buy products made with REPREVE® to make a difference.

---

to each year, at least 8.8 million tons of plastics make their way into the ocean, which is the equivalent of dumping the contents of one garbage truck into the ocean every minute. In addition, at least 80 percent of plastic flows into the oceans from land, and at current rates, there will be more plastic by weight than fish by 2050. reprevE our ocean is made from bottles collected within 50 kilometers of coastlines in countries or areas that lack formal waste or recycling systems.

---

the Forest Stewardship Council is an international non-profit, multi-stakeholder organization established in 1993 to promote responsible management of the world's forests. The FSC does this by setting standards on forest products, along with certifying and labeling them as eco-friendly.

---

hydrophobic finishing with BIONIC-FINISH® ECO is based on a fluorine-free recipe. Hyperbranched, hydrophobic polymers with ramified structures like in tree tops orientate in an orderly manner on the textile and crystallise on specifically adjusted comb polymers. The optimum arrangement of many of these functional elements is highly effective. Additional boosters (crosslinking agents) ensure the optimum attachment and durability on many fibre substrates.

---

compostability confirms the suitability of a product for composting in an industrial composting plant. The product's suitability for home and garden composting, can also be certified.

---

an independent and transparent quality mark showing the content of biobased carbon and the product quality makes searching for resource-saving products easier. By using the "DIN-Geprüft" (DIN tested) certification mark, you are putting on record that you use biobased raw materials and that you are subject to regular inspections.

40 L x 27 W x 3 T cm

marine life dog toy collection is made of REPREEVE® Our Ocean™ polar fleece, which is made from bottles collected within 50 kilometers of coastlines in countries or areas that lack formal waste or recycling systems, in order to deal with the root cause of ocean plastic. each year, at least 8.8 million tons of plastics make their way into the ocean, which is the equivalent of dumping the contents of one garbage truck into the ocean every minute. plastic kills fish, birds, marine mammals and sea turtles, destroys habitats and even affects animals' mating rituals, which can have devastating consequences and can wipe out entire species. the selected marine life characters remind people of ocean pollution and the responsibility of protecting environment.
